TAMING THE TEACHERS CONFERENCE
ROOM WITH A SIMPLE SOLUTION

The Brief

Teachers meeting room is unintelligible making it difficult for meeting attendees to clearly concentrate on core issues.

The Solution

Integrated Audio Solutions conducted a site visit revealing flutter echo artifacts, due to the “live” walls and large glass window and door, complicated further by a high raked ceiling. Integrated Audio Solutions put forward a definitive low cost solution — Primacoustics Broadway panels, comprising of six (6) 122cm x 61cm x 5cm absorber panels. The panels were flown as a cloud configuration above the conference table, effectively lowering the room’s “ceiling” in the critical area.
